When I was 14-15 years old, I used to "play" with HTML. Just for pure fan. I would make section Menu in kpop fan communities of VKontakte, and I could do it for hours. But at this time I never considered this hobby as a future career. And no one around me, including my parents, too, even though they knew I loved it. But during COVID-19, after getting Master's degree in Bussines-communication, I fell in love with programming once again. I tried all kinds of free tutorials and realised I still can do it. Now, I intend to become **THE** software-engineer, who knows theirs work very well!

- 😎 Got both creative and analytical skills
- 🐱 Pretty diligent and patient
- 👉 Open-minded, can work with people from diverse backgrounds
- 🚀 "Naruto taught to never give up"
